

TruFLARE

TruFLARE is a uniquely engineered and semi-automated bench top flaring system. It creates a standard tube flare end by pressure forming and rapidly cooling the flare form. The bench top TruFLARE system is ideal for production flaring as it assures precise, concentric, repeatable tube flare connections. This requires no immediate assembly, which is often the case with other rudimentary hot flaring systems.

Key Features

- Ideal for production flaring.
- Create precise, concentric, repeatable tube flare ends.
- Automated touchscreen interface with pre-programmed tube settings.
- Exceptionally user-friendly.
- Consistent flares that hold their shape over time.
