Custom Fabrication

Every Fit-Line Global's custom welded fabrication is manufactured from virgin high purity PFA and PVDF resin providing chemical resistance and ultra-high purity.

With over 30 years of fluoropolymer and injection molding expertise, Fit-Line Global's proprietary, patented methods reduce the time needed to create custom manifolds in a matter of days, not weeks. So, you can go from sketch, to a CAD model, to a finished welded manifold in just a matter of days.
